

Acoustic Enclosure for Apple Devices

Designed for Acoustic Testing of Mobile Devices

RackSolutions Acoustic Enclosure for Apple iPhone and Apple iPad is the perfect solution for voice user interface designers. Designed with an inner foam that prevents scratching and isolates the sound from the outside, the enclosure is used to test out the virtual assistant feature of a smartphone or tablet. You will be able to interact with the virtual assistant through voice or speech commands, such as "Hey Siri" or similar.

By using our acoustic enclosure for real device testing, you will be able to test the virtual assistant's ability to understand spoken language and responsiveness to voice recognition. You can also test out the different voices, languages, and accents of the virtual assistant.

- Used for testing voice user interface (VUI)
- Test device for voice activation and wake words
- 106-8573 is compatible with mobile devices up to 1" D x 3" W x 7" H
- 106-8575 is compatible with tablet devices up to 1" D x 8.5" x 11.4" H
